

Alternative Administration System

Version: 0.3, Created by [John Barounis](#) , www.alternative-administration-system.com

Alternative Administration System is an essential plugin for osCommerce cms that is ideal in task delegation and product manipulation. At it's core, AAS allows end users to utilize basic and advanced osCommerce administrative functions with added features of dynamic product manipulation.

CONFIGURATION

In order to configure AAS (Alternative Administration System) open and edit as necessary the **catalog/admin/ext/aas/config.php** file!

Inside **config.php** you will find information about configuring A.A.S.

Available configurations:

- set up **defaults** (display things or not, entries per page, e.t.c.)
- change max products select menu
- add table fields such as p.cost to search a product for
- change order by select menu
- change which table fields are visible, sortable, editable by default
- **add new custom fields!**
- add extra fields from other tables than products
- apply custom css rule to each table cell (useful if you want to for example to keep a cell in specific width)

PRODUCT DESCRIPTION UNIQUE ID WRAPPER

In order to be able to preview the product description before applying any changes you need to set up a unique id that is wrapped on the products description code which can be found in the catalog's product_info.php page.

You can change it to whatever you like but make sure you have also edit catalog's product_info.php and change:

```
<?php echo stripslashes($product_info['products_description']); ?>
```

to <?php echo ''.stripslashes(\$product_info['products_description']).''; ?>
or to <?php echo stripslashes(\$product_info['products_description']); ?>

Where XXX is the value of the key productDescriptionUniqueIdWrapper which is by default 'aas'.

END
